Business Experience

OptiMax, South Africa (Software Company)

London, UK

Independent Consultant

03/2025 – 09/2025

- Developed board proposals for new and refreshed company products, including automated post-sales customer calls and customer acquisition calls, while ensuring alignment with EU/SA regulations.
- Created architecture for clients' customer databases using Python and SQL to automate customer check-up scheduling.
- Facilitated upgrades of clients' communication channels, integrating WhatsApp business across platforms.

Solving7 Green, South Africa (Non-Profit Organization)

London, UK

Project Lead

03/2023 - Present

- Created and distributed 10,000 upcycled, plastic, school desks to underfunded schools in South Africa.
- Managed a 6-member team carrying out data analysis on plastic waste and desk supply in Sub-Saharan Africa.
- Led initiatives for female employment for waste-picking, and carpentry, creating jobs for 50+ local women.
- Raised USD 1.5M from European and African entities including Cyril Ramaphosa Foundation for project delivery.
- Led stakeholder engagement to expand the project across Eastern Africa specifically Rwanda, Uganda and Kenya.

ESAS Holding UK Ltd (Private Equity)

London, UK

International Real Estate Associate

01/2018 – 01/2023

- Led initiatives for a USD 2.6B real estate portfolio over the UK, North America and Western Europe, including developing new asset classes (student accommodation and life science) in new markets (Canada).
- Managed the refurbishment of ESAS' central London 6-story HQ managing a 15-person team consisting of architects, engineers, and construction workers, and managing a GBP 12M project budget.
- Created forecasted free cashflows and pitch decks for potential acquisitions to Investment Committee members.

Education

FlatIron School – Flexible Software Engineering Bootcamp

2023 - 2024

- Full Stack development using JavaScript, HTML, CSS, React.js, Python, Flask and SQL
- Received a 25% academic scholarship.

University of Dundee – Bachelor of Science with Honours in Economics

2012 - 2016

Technical Projects

NihonGo [GitHub](#)

- A full stack application designed for streamlining travel across Japan.
- A multi-page RESTful API with 34 unique routes, allowing seamless communication between front and back-end.
- Utilized and deployed PostgreSQL database, SQLAlchemy models and React.js for consistent data storage.
- Implemented techniques such as Polymorphic Identity, Google Maps API, and local file uploads.

Update or Donate [GitHub](#)

- A Python CLI app focused on donations to specific charities that can be modified with ORM methods.
- For each class in the data model, the CLI can create, and delete objects, as well as display all objects, view related objects and find an object by an attribute.

Gotta Catch Em All [GitHub](#)

- A front-end application that uses vanilla JavaScript, HTML and CSS to display all original 151 Pokémon cards.
- Accesses Pokémon data from a public API that are displayed on each Pokémon card.
